University of Texas Austin	**IFML Postdoctoral Fellow**
	2023 – present, University of Texas at Austin
	Working on of reliable and efficient ML. My research aims to design better algorithms for imperfect or corrupted data tackling challenges such as learning from noisy labels or from biased or censored data. I am particularly interested in developing principled, efficient, and practical algorithms.
Google	**Research Intern**
	2022, Google Research, Mountain View
	Worked on semi-supervised knowledge-distillation. Developed new, practical, and principled distillation methods that improved the SOTA. (published in NeurIPS 2022, and NeurIPS 2023).
Grnet	**Systems and Services Engineer**
	2016, Greek Research and Technology Network, Athens
	Monitoring services, network, and servers, automation of procedures, development and maintenance of administration tools.
